ACES 3: Mythbusters--Common Misunderstandings

The Aviation Continuing Education Seminar (ACES) series is designed to provide continuing education to our CFIs and students on areas in which students have statistically exhibited difficulty on stage checks.

The third of the series will focus on commonly misunderstood topics varying from common carriage to planning your top of descent. Our speaker will be our very own Brad Dill. Brad is a graduate of BSU and has worked as flight instructor both at BSU as well as Beverly Flight Center. He had the opportunity to fly a PC-12 around the U.S., Canada, and the Bahamas for PlanseSense based out of Portsmouth, NH. He has returned to us as the Staff Assistant for Standards and Evaluation. In addition to his flying talents, Brad is also an Emergency Medical Technician and CPR Instructor.

What "Common Carriage" means

Preventative Maintenance

Commonly misinterpreted regulations

What is maneuvering speed?

Logging flight time
